SUMMARY

Motivated and skilled Senior Java Developer focusing on High-Performance, high-availability, and high-throughput systems. Strong problem-solving skills and in need of a challenge. A very good database designer, and for me, that is the building block for any application and service.

WORK EXPERIENCE

2016-08 - Present

Senior Java Developer

Bank of America

- Responsible for prepaid Airtime, Electricity, Lotto, Funeral Plans, Bills, etc.
- Investigating new technologies and frameworks that may make our lives a bit easier. Recently added GrayLog and Hashicorp Vault.
- Running a team of three developers and guiding them through requirements and how a system/component must be effectively developed, and sometimes they guide me, and it works well in the end.

2014-06 - 2016-07

Senior Java/.Net Developer

Nextware Technologies

- Designed, developed and maintained enterprise systems.
- Worked with J2EE,.Net and IOS on a daily basis.

2010-05 - 2014-05

Java Developer

Trigent Software

- Worked on two projects during this time. Using JavaEE and Web Front end technologies like Java Servlet, JSP, Struts 2, JQuery, JQuery UI.
- Worked on the backend and frontend parts of the projects, but mostly the backend part.

2006-03 - 2010-04

Software Developer

HQSoftware

- Designed, Developed and tested new applications and components using Continuous Integration Development.
- Programmed in Java/J2EE language and Worked with various technologies including Spring, Spring MVC, Maven, Hibernate, JDBC, SOAP, and RESTful web services.
- Developed automated functional and performance tests and data analysis software using Python language.
- Conducted compatibility and quality assurance testing.
- Configured, troubleshoot and tuned Relational Databases including Oracle and MySQL.
- Designed data models, created complex and efficient queries, partitioned tables for system improvements and chose the right Data Store for each component.
- Analyzed system specifications and proposed accurate technical solutions Implemented optimized and standard code using coding standards and technical design.
- Improved code quality by using code analysis tools like SonarQube.
- Redesigned components to reduce the cost of product development.
- Worked with version controls including SVN and Git.
- Deployed and tuned applications on Tomcat web server.
- Deployed components on Linux servers.
- Generated easy-to-read automated tests using Robot Test Framework Setup, configured and maintained virtual Linux servers.
- Agile teamwork using JIRA and Scrum boards.
- Provided accurate estimates on items of development work.
- Participated in the review of the colleague's code.
- Generated documents for customers.

SKILLS

JAVA/JAVAEE TECHNOLOGIES

////////////

Working on various technology frameworks and knowledge about programming concepts like:
- SOLID, Spring
- OOP Principles
- Design Patterns
- Unit/Integration Testing
- Data-structures and Algorithms

JAVASCRIPT AND JAVASCRIPT TECHNOLOGIES

////////////

I have mixed the professional and study experience on JavaScript, overall concepts and technologies:
- AngularJS
- UnderscoreJS
- JavaScript OOP
- JQuery, RequireJS

Java EE (6 & 7)

////////////

- EJB, JBoss
- Glassfish, Web Services
- Socket Programming (NIO)

Java Web

////////////

- JSP
- JSF
- CSS
- GWT
- JSON
- JavaScript

Software Development

////////////

- Scrum, Team Work
- Agile Methodologies
- Java Design Patterns
- Continuous Integration
- Object-oriented Design

Software Programming Languages

////////////

- SQL
- HTML
- BASH
- Python
- JavaScript
- JAVA/J2EE
